

# **A MORE EFFICIENT WAY TO DETECT DNB IN A LARGE NETWORK**

Ruochi Zhang from HILab

[zrc720@gmail.com](mailto:zrc720@gmail.com)

# STEPS

01

## PART1

The theory of DNB

02

## PART2

The time is limit

03

## PART3

The parallel computing to  
detect DNB

04

## PART4

The next work

## Fewer datas

**Merely requires a few samples** in each sampling period, in stark contrast to the consecutive time-series data over the entire period required by the traditional methods

## Important significance

**Early-warning signal** which indicating an imminent bifurcation or sudden deterioration before the critical transition occurs

## Model-free

This **model-free method based on measured individual data**, can detect specific signals for each individual or potentially apply this method to personalized medicine

# STEPS

01

## PART1

The theory of DNB

02

## PART2

The time is limit

03

## PART3

The parallel computing to  
detect DNB

04

## PART4

The next work

$$CI = \frac{SD \cdot PCC_{inner}}{PCC_{outer}}$$

$$CI = \frac{SD \uparrow \cdot PCC_{inner} \uparrow}{PCC_{outer} \downarrow}$$

- 1 suppose  $n$  is the number of nodes
- 2 SD:  $O(n)$   
The average standard deviations (SDs) of molecules in this group drastically increase.
- 3 PCC(inner):  $O(n^2)$   
A group of molecules's average Pearson's correlation coefficients
- 4 PCC(outer):  $O(n^2)$   
The average PCCs of molecules between this group and any others

Time complexity is a **limit** for us to find a DNB in a large network

# Parallel Computing

# STEPS

01

## PART1

The theory of DNB

02

## PART2

The time is limit

03

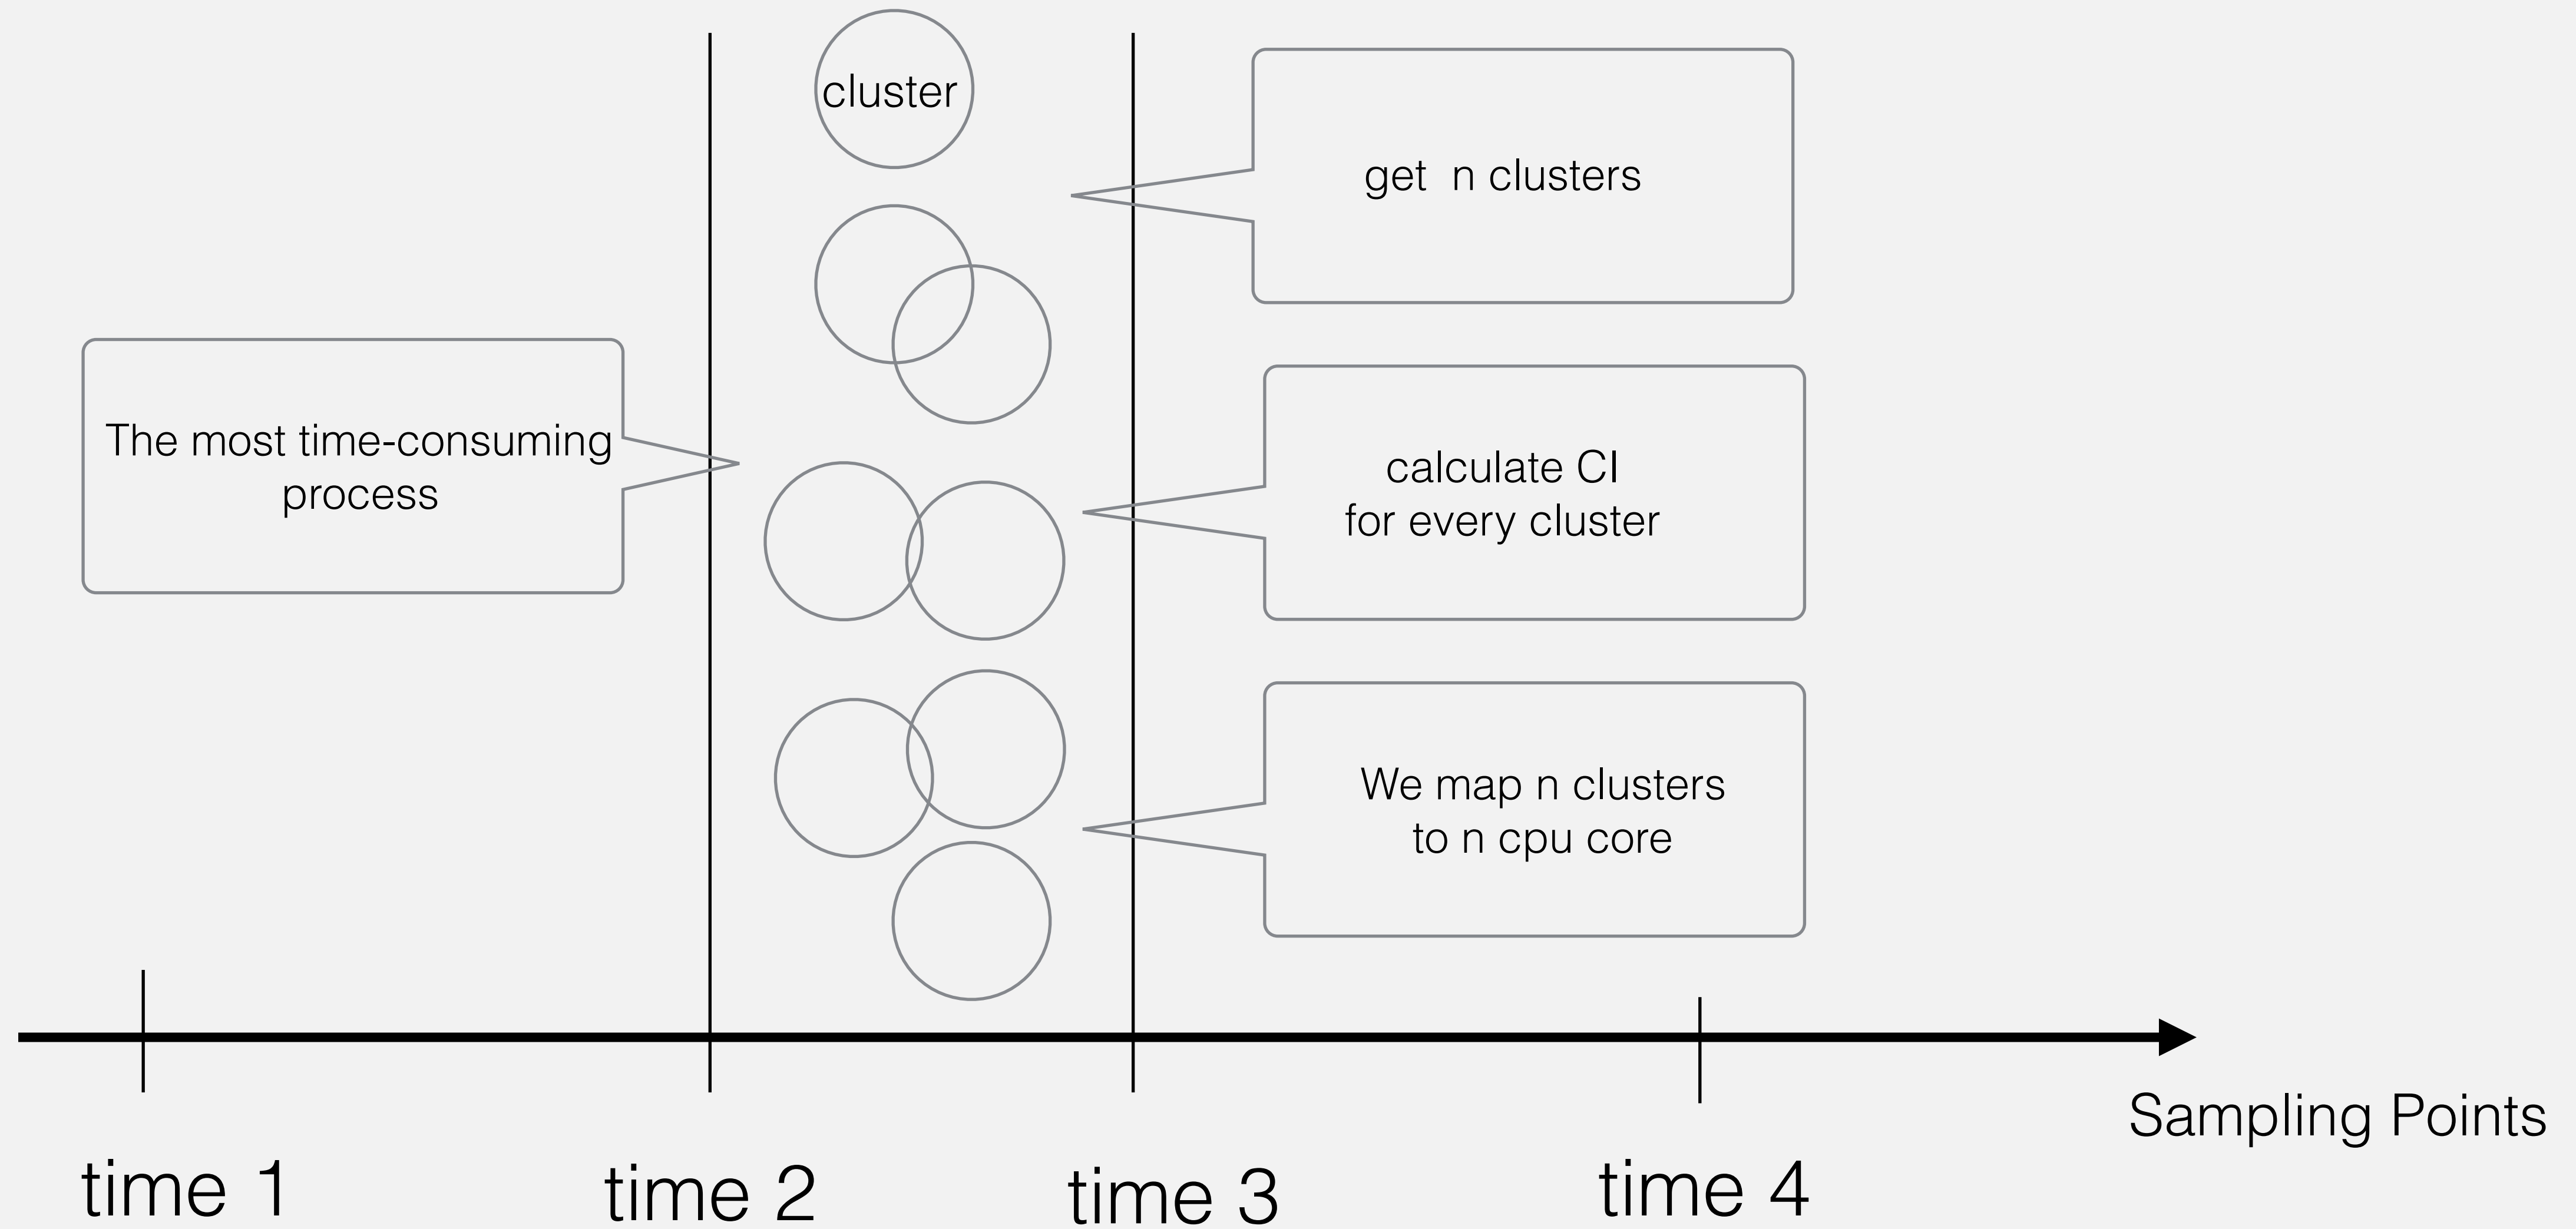

## PART3

The parallel computing to  
detect DNB

04

The next work

RAW DATA OF LIVE CANCER

10729 nodes

5 samples

5 Sampling points

AFTER VAR AND T-TEST FILTER

Period 1: 1242 nodes

Period 2: 953 nodes

Period 3: 962 nodes

Period 4: 919 nodes

Period 5: 845 nodes

CLUSTERS OF EACH SAMPLING POINT

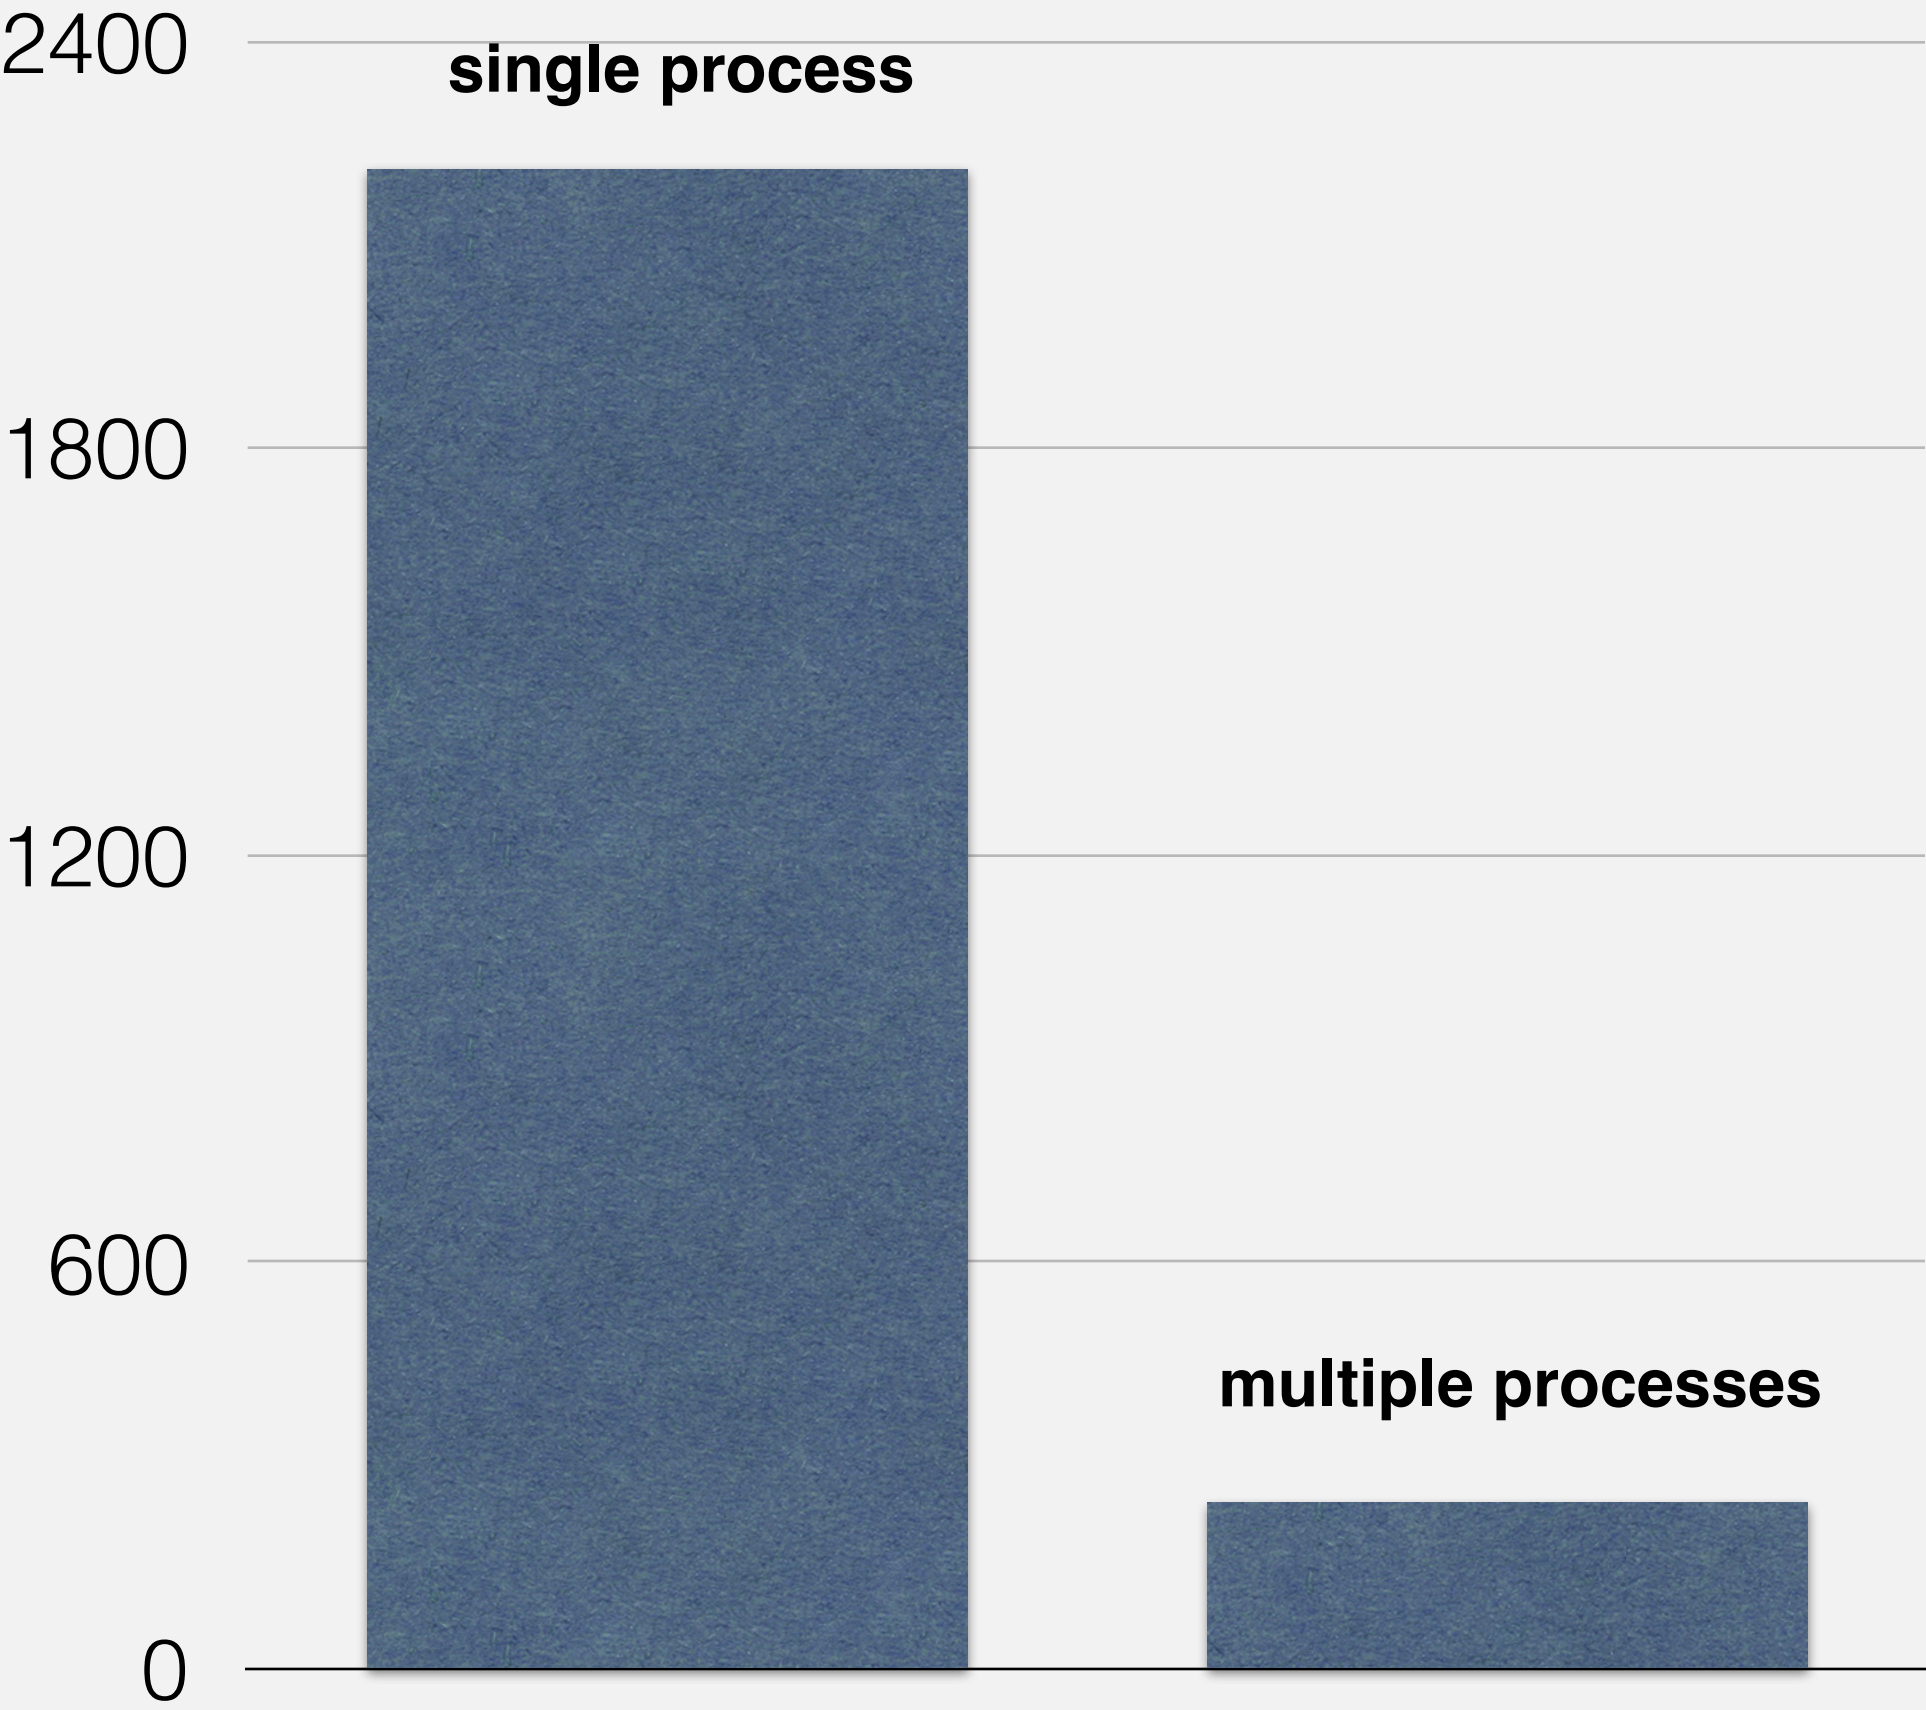

Period 1: 35 clusters

Period 2: 35 clusters

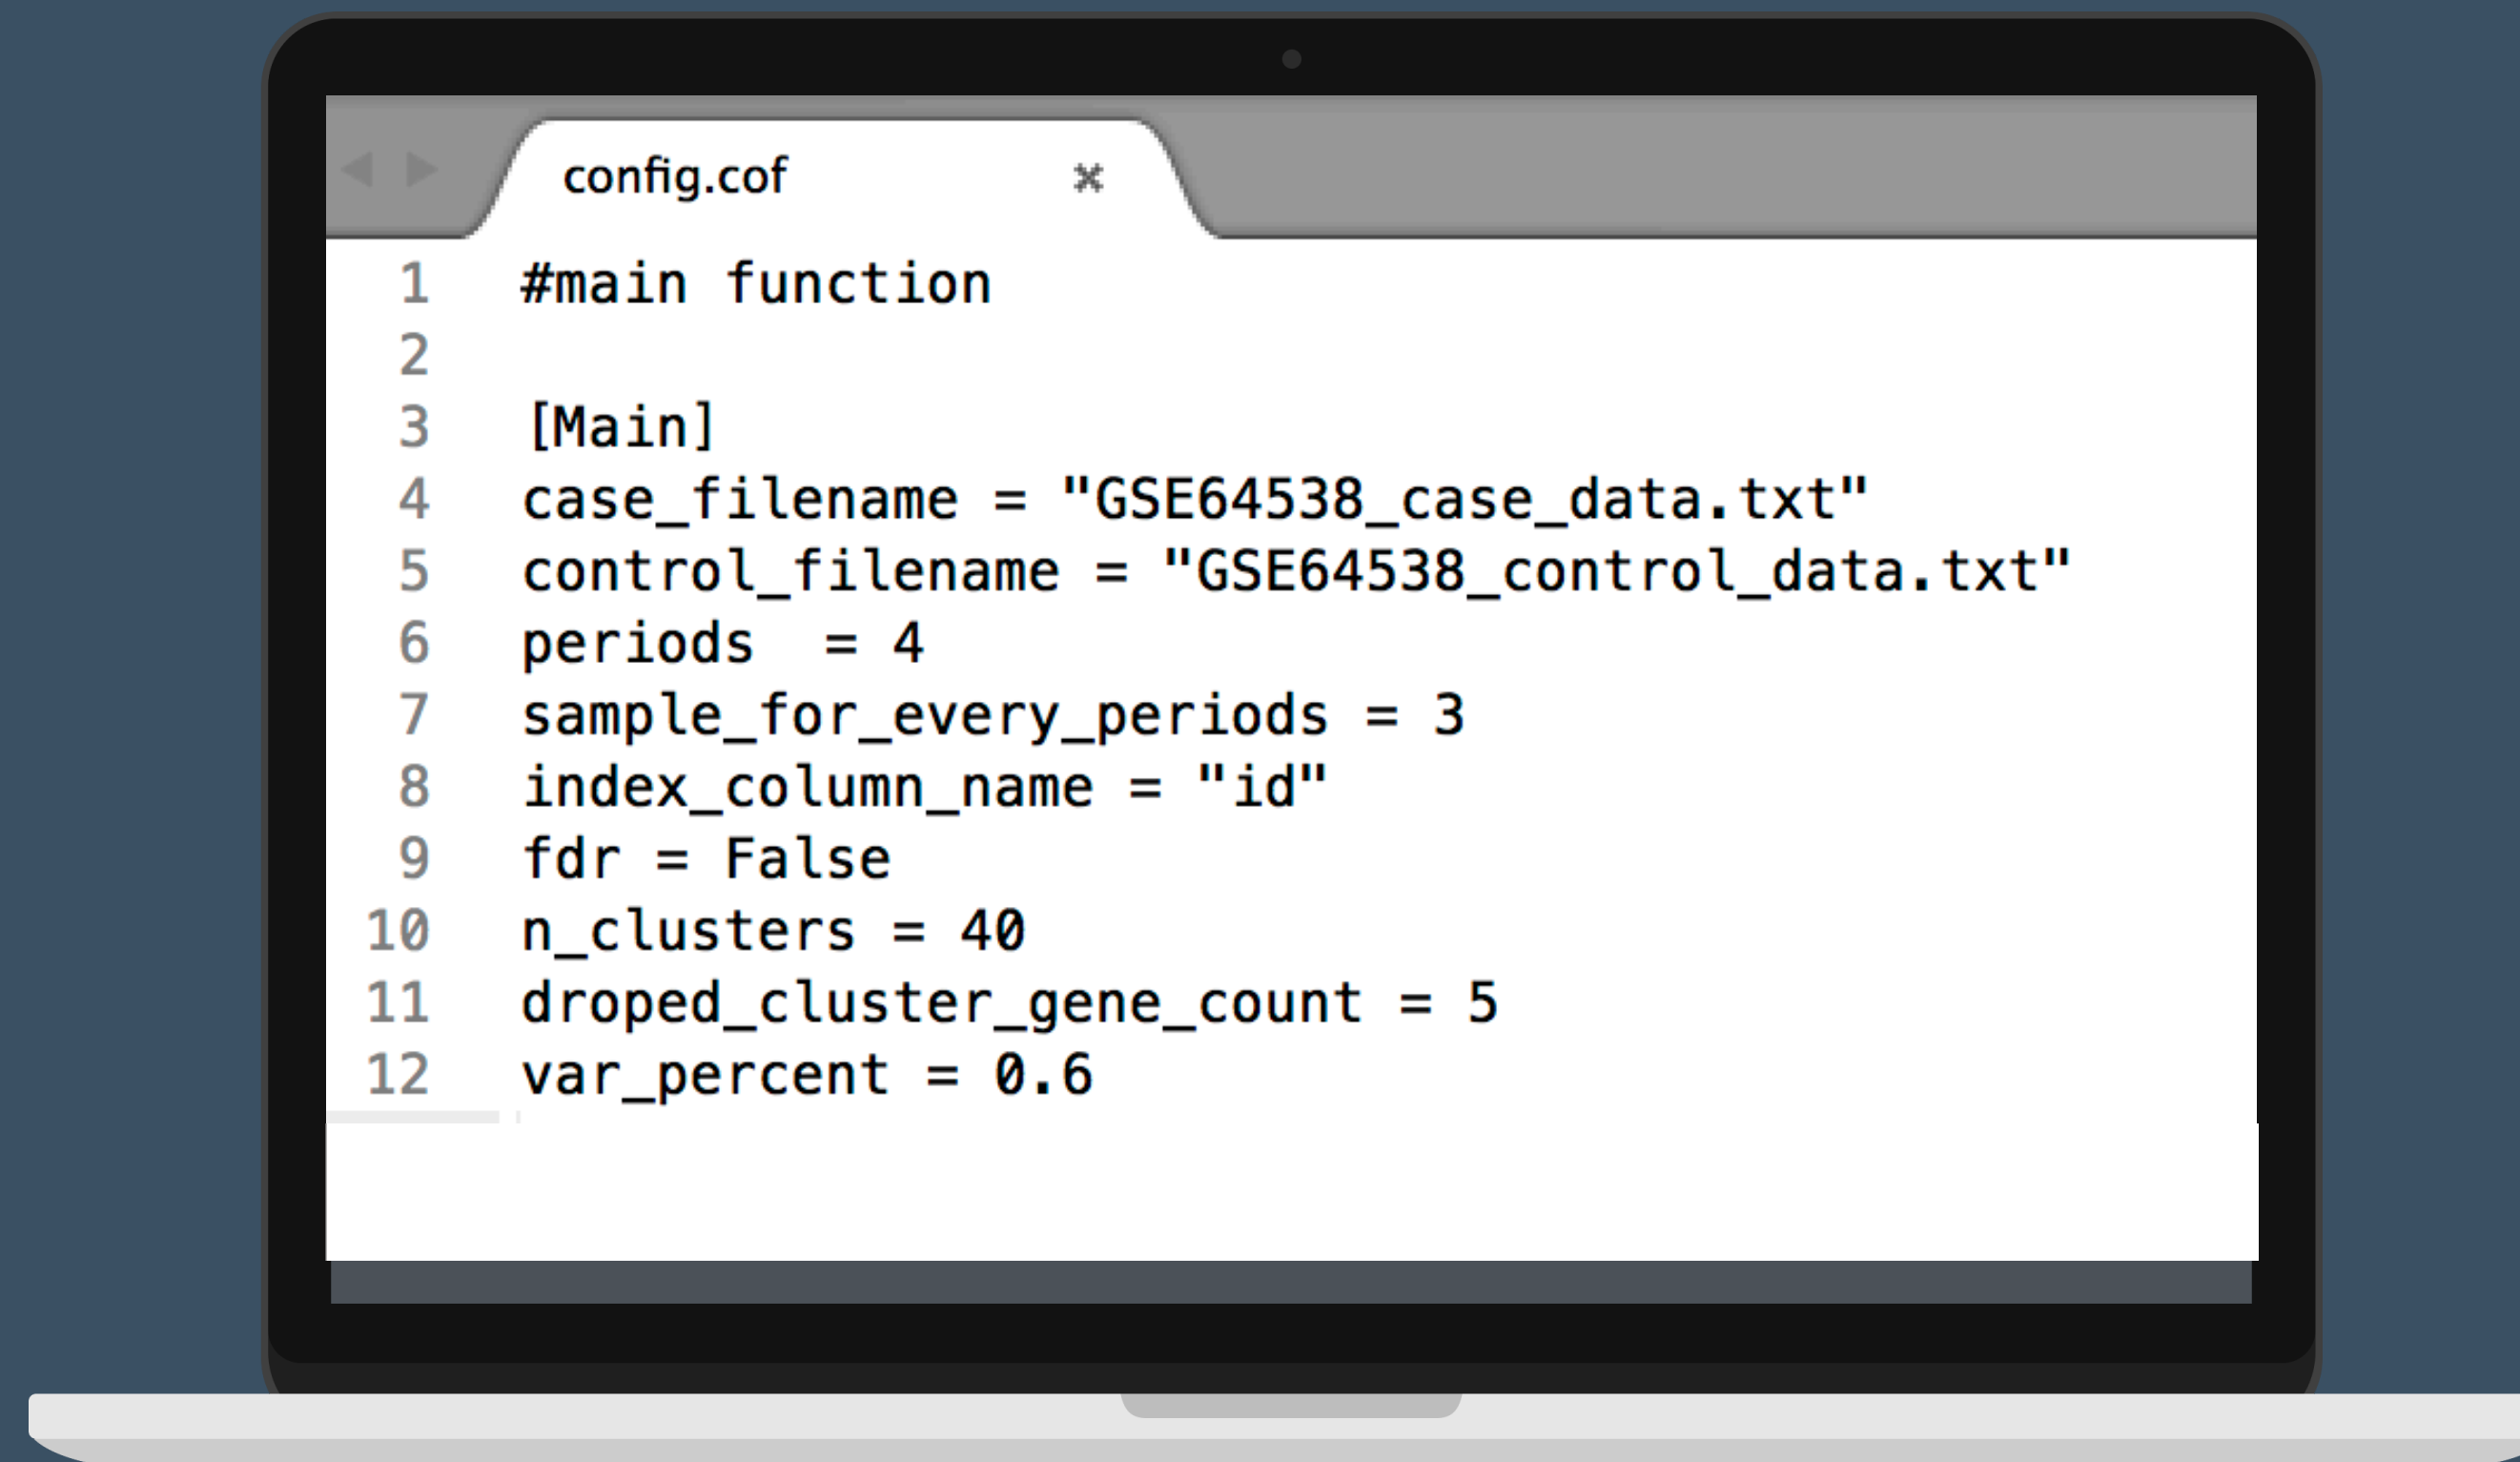

Period 3: 38 clusters

Period 4: 34 clusters

Period 5: 37 clusters

Just need to modify the configure file, then click run

```
1 #main function
2
3 [Main]
4 case_filename = "GSE64538_case_data.txt"
5 control_filename = "GSE64538_control_data.txt"
6 periods = 4
7 sample_for_every_periods = 3
8 index_column_name = "id"
9 fdr = False
10 n_clusters = 40
11 dropped_cluster_gene_count = 5
12 var_percent = 0.6
```
